DATE:

PUBLIC CLOUD CREATING AN INSTANCE IN SALESFORCE

AIM:

Develop a simple application to understand the concept of PAAS using Sales force

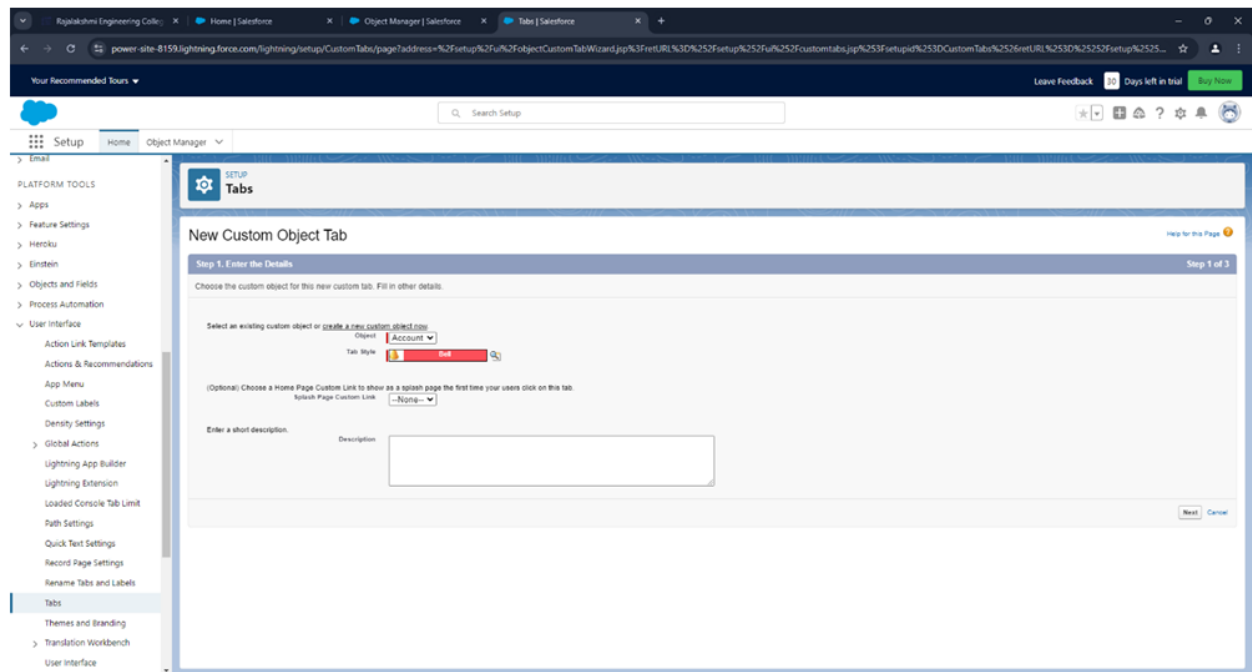

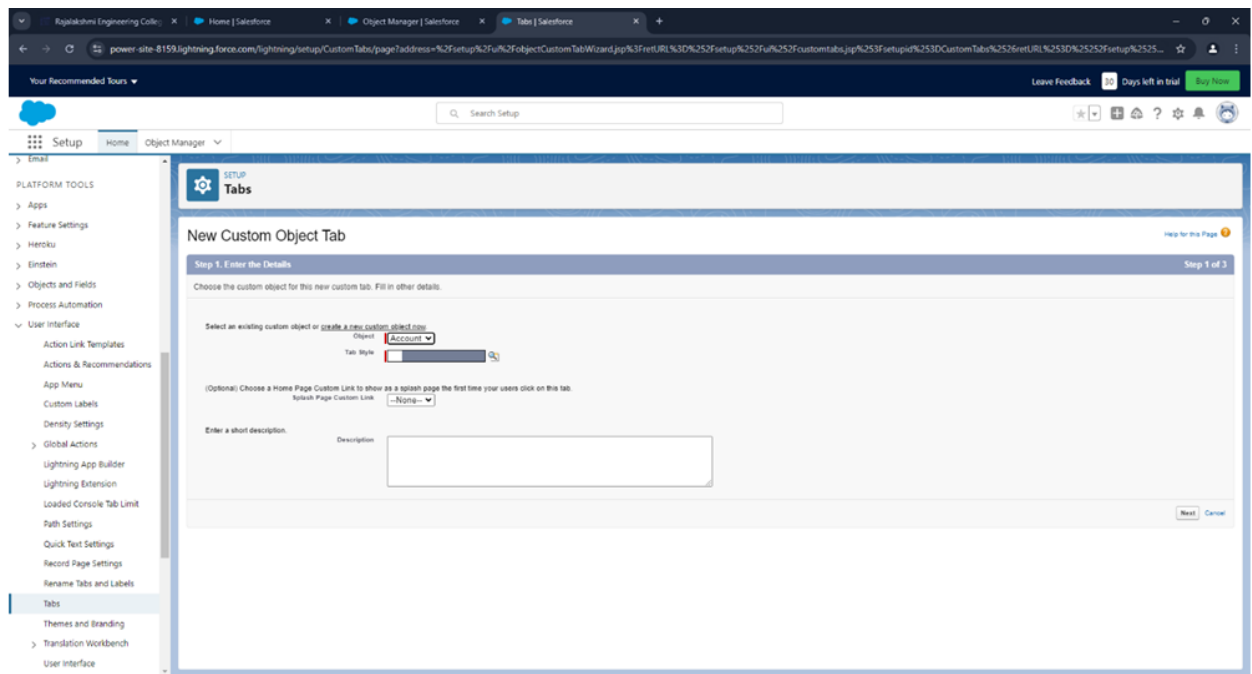

PROCEDURE:

- 1.Log in to your Salesforce account.
- 2.Click Setup at the upper-right corner.
- 3.Under the Build section, click Create and select Objects.
- 4.To create a custom object, click New Custom Object.
- 5.Enter the name of the Custom Object in Label, Plural Label, and Object Name.
- 6.Choose the custom apps for which the new Custom tab is required and click Save.
- 7.Select whether you want to define a custom app or a Salesforce console.
- 8.Give the app a name and description. An app name can have a maximum of 40 characters, including spaces. Click Save.

OUTPUT:

The screenshot displays the 'New Custom Object' configuration page in Salesforce. At the top, there's a navigation bar with 'Setup', 'Home', and 'Object Manager'. The main heading is 'New Custom Object'. Below this, a yellow banner states: 'Permissions for this object are disabled for all profiles by default. You can enable object permissions in permission sets or by editing custom profiles. [See the docs](#) | [Click to show this message again](#)'. The 'Custom Object Definition Edit' section contains the following fields:

- Label:** Text input with 'Account' entered. Example: Account.
- Plural Label:** Text input with 'Accounts' entered. Example: Accounts.
- Starts with vowel sound:** A checkbox that is currently unchecked.
- Object Name:** Text input with 'Account' entered. Example: Account.
- Description:** A large text area for describing the object.
- Context Sensitive Help Setting:** Two radio buttons. The first, 'Open the standard Salesforce.com Help & Training window', is selected. The second is 'Open a window using a Visualforce page'.
- Enter Record Name Label and Format:** A section with a note: 'The Record Name appears in page layouts, key lists, related lists, lookups, and search results. For example, the Record Name for Account is "Account Name" and for Case it is "Case Number". Note that the Record Name field is always called "Name" when referenced via the API.' It includes a 'Record Name' text input with 'Account Name' entered (Example: Account Name) and a 'Data Type' dropdown menu set to 'Text'. A warning message states: 'Warning: If you plan to insert a high volume of records in this object, via the API for example, use the Text data type.'
- Optional Features:** Two checkboxes: 'Allow Reports' (checked) and 'Allow Activities' (unchecked).

Custom Tabs

You can create new custom tabs to extend Salesforce functionality or to build new application functionality.

Custom Object tabs look and behave like the standard tabs provided with Salesforce. Web tabs allow you to embed external web applications and content within the Salesforce window. Visualforce tabs allow you to embed Visualforce pages. Lightning Component tabs allow you to add Lightning components to the navigation menu in Lightning Experience and the mobile app. Lightning Page tabs allow you to add Lightning Pages to Lightning Experience and the mobile app.
